

Google Fonts WordPress Plugin

di Paolo Franzese

The screenshot shows the WordPress.org Plugin Directory page for the 'WP Google Fonts' plugin. The page layout includes a top navigation bar with 'WordPress.org' and 'Go' buttons, and a secondary navigation bar with links for 'Home', 'Showcase', 'Extend', 'About', 'Docs', 'Blog', 'Forums', 'Hosting', and a 'Download' button. The main heading is 'Plugin Directory'. On the left, there are navigation menus for 'Extend Home', 'Plugins' (with 'Developer Center' as a sub-link), 'Themes', 'Mobile', 'News', 'Events', and 'Search Plugins'. Below these are 'Popular Tags' such as 'widget (2087)', 'font (1476)', 'plugin (1248)', 'post (1133)', 'admin (1090)', 'viewer (1028)', 'comments (898)', 'image (728)', 'header (688)', 'page (640)', 'google (636)', 'link (611)', and 'image (588)'. The main content area features the plugin title 'WP Google Fonts' and a brief description: 'The WP Google Fonts plugin allows you to easily add fonts from the Google Font Directory to your WordPress theme.' Below the description are links for 'Description', 'Installation', 'FAQ', 'Screenshots', 'Changelog', and 'Stats'. The description text continues: 'Google's free font directory is one of the most exciting developments in web typography in a very long time. The amazing size of this new font resource has made this plugin the most popular font plugin on WordPress and it shows no signs of stopping. While font plugin solutions like FontBundle.com have helped bring rich typography to WordPress themes, the selection of fonts easily available to the average blogger have been limited. The WP Google Font plugin makes it even easier to use Google's free service to add high quality fonts to your WordPress powered site. Not only does this plugin add the necessary Google code, but it also gives you the ability to assign the Google fonts to specific CSS elements of your website from within the WordPress admin. Or if you would rather, you can target the Google fonts from your own theme's stylesheet. Right now, the Google Directory has 77 great fonts, and the selection is steadily growing. As new fonts are added, we will release updates to the plugin quickly so you can start using new fonts as they become available. It truly is an exciting time to be creating websites, and I hope this plugin helps you create some great stuff. - Adrian' The author is listed as 'Adrian Harfi'. There are also tags: 'admin, CSS, design, font, fonts, free fonts, google, Google fonts, links, page, plugin, post, template, theme, font, typography'. On the right side, there is a 'Download Version v1.8' button, followed by requirements: 'Requires WordPress Version: 2.9.2 or higher', 'Compatible up to: 3.0.5', and 'Last Updated: 2011-1-11'. Below this is an 'Average Rating' section showing five stars and '(20 ratings)'. Further down, there are sections for 'FTR' (with 'Other versions' and 'Down to this page' links), 'Forum Posts' (with a 'Development Log' link), and 'Compatibility' (with 'WordPress' set to '3.1' and 'Plugin' set to 'v1.8'). A yellow box indicates 'Not enough data' for compatibility, with '3 people say it works' and '0 people say it's broken'. A 'Log in to vote' link is also present.

Ho appena installato su www.nostromatrimonio.it un plug in di Wordpres per la getione dei fonts con Google Font Directory.

Prime sensazioni? Ottimo Plug in che ti rende semplicissima l'integrazione di Google Font: [Google font wordpress plugin](#)

Si gestisce semplicemente nel box Appereance, accedendo alla lista dei font disponibili e con la possibilità di personalizzare l'effetto dei font sul sito.

Voi lo userete? Fatemi sapere...
