

# Automated CSS Tools and Generators

*di Paolo Franzese*

Come generare automaticamente **layouts** e **CSS**:

1. [CSS Creator](#): Select the form colors, number of columns, html version, and press a button. Presto, a CSS template for your page.
2. [Inknoise](#): The layout-o-matic: fill out the form and out pops your CSS.
3. [Strange Banana](#): Simply refresh the template generator until you get the style you like, then save the page which has your CSS embedded in the header.
4. [Nidahas](#): A CSS-based form template.
5. [Maketemplate](#): A PHP – HTML – CSS template generator for two column layouts.
6. [IBDjohn](#): CSS template generator for three column layouts.
7. [TemplatR](#): Another easy CSS template generator.
8. [PsychHo](#): Your own psychogenesis, your own web design template.
9. [Firdamatic](#): Tableless 2 or 3 column layout generator.
10. [WordPress Theme Generator](#): Online generator creates custom unique WordPress themes.
